Where we are now

- Information gathered through consultation was used to produce a tender specification

- Following the tender a new external networking partner – BtiNet - has been appointed

- We are now working with them to produce a new network design which will include:
  - Advanced data centre architecture
  - Improvements to wireless access
  - Replacement of firewalls which will support a more flexible IT security architecture
  - Maintain existing high levels of network reliability
  - Paves the way for a variety of IT system developments over the next 5 years

- Introduction of the new network design is planned for early January 2011
