Improving the Student Experience...

Created a Network Roaming profile which has drastically improved Student login times. On average it takes just one minute to login.

Working on rewriting Staff and Student login scripts and batch files using the latest GPP (Group Policy Preferences) technology and then using Item level targeting which picks out certain aspects in AD giving the user a faster experience.

Oldham & Barnsley Campuses are the only sites which deploy a true Windows 7 x64 Student Desktop image. Giving the user a faster environment, more applications and a better all round Student Experience.

All these new technologies have been trialled at the Oldham Campus and hopefully will be coming over to the main site for the next Academic Year.
