Mobile Device Management (MDM)

Mobile Control provides an easy way for us to manage all our smartphones and tablets. Our Enterprise Mobility Management (EMM) solution handles them from the initial setup and enrolment, right through to device decommissioning. Our fully web-based console allows administration from any location on any device.

- Manages and controls iOS, Android (including Samsung SAFE) and Windows Phone devices
- Configures device policies and deploys them over the air
- Enforces built-in security features such as passcodes and device encryption
- Provides full loss and theft protection for lost or stolen devices
- Builds group-based compliance policies

Manage Mobile Requests with Simplicity

IT experts have to manage and secure smartphones, tablets, laptops and desktops. However, those entities are typically viewed and managed separately. That adds risk and complexity.

To ensure productivity, Sophos Mobile Control was built for IT professionals that want to enable mobile computing. Sophos Mobile Control manages and secures mobile devices, content and applications with a user-centric approach that delivers the simplest experience for administrators and users.
